

Introducing: TC Furniture

Desks, tables and storage

Product **Quality** People

"Striving to exceed expectations"

At TC, our purpose is to deliver quality in everything that we do and this resides at the heart of our business. From the integrity and drive of the people, to the sourcing and supplying of quality products, our approach is well established and is a powerful proposition for our customers.

We understand the changing demands of the marketplace and the needs of our dealer partners and will continue to deliver a fresh and comprehensive portfolio in what is a product and service driven industry.

Our goal is to build strong and lasting relationships with customers, as we believe by working closely together we can achieve more and make the experience both positive and enjoyable.

Our Standards

FIRA Membership

The Furniture Industry Research Association (FIRA) is an internationally recognised research body for furniture and seating in the UK. FIRA membership allows us to place our products through stringent product tests in order to ensure that they meet the appropriate quality standards. Our products have been tested to British, European and International standards and all tests and certificates are backed by accreditation from the UK Accreditation Service (UKAS).

British and European Standards

KiS+ workstations conform to **BS EN 527-2:2002** mechanical safety requirements for office furniture, work tables and desks and **BS EN 12521:2009** to test level 4 requirements for strength, durability and stability of tables for domestic and contract use.

BCFA

The BCFA (British Contract Furnishing & Design Association) is the trade association for the British contract furnishing industry. Their members are designers, manufacturers and suppliers of furnishing services to the office, hospitality, education and healthcare industry. As members of the BCFA, we are committed to achieving higher standards across the design of our products and the quality of our customer service.

Environmental Policy

As one of the UK's leading suppliers of office seating and furniture, we pride ourselves on setting the highest standards when developing new products. These high standards apply not only to the quality of the products themselves, but also to the environmental impact of their production.

From packaging to plastic, we strive to ensure that all the products shown in this catalogue make use of recycled materials.

This includes:

- the cardboard and plastic used for packaging
- the plastic and metal components
- the wood used in our products

Research has enabled us to pinpoint the optimum proportion of recycled material (30-35%) within our products, ensuring the high quality is not compromised. The wood is produced using a manufacturing process which combines recycled scrap wood with a specialist resin technique to produce high strength panels. Crucially, these panels can also be recycled after their lifetime into new panels, continuing the recycling chain.

We employ state of the art technology and lean manufacturing techniques to ensure the optimum number of products are produced from each board. All of our products are designed to allow each component to be replaced individually, minimising the level of waste generated.

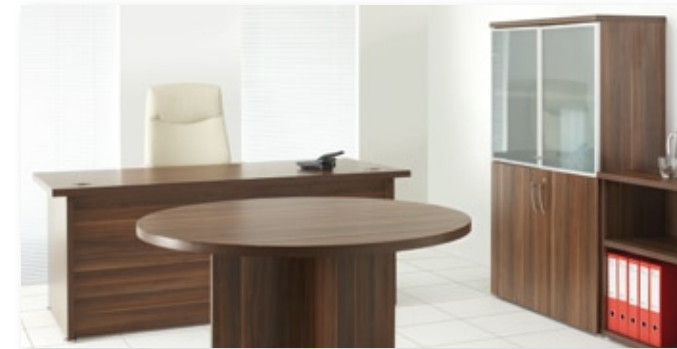

Our commitment to reducing our environmental footprint is ongoing and regular evaluations of our procedures ensures that we are continually implementing new strategies to improve our environmental policy.

Guarantee

All products carry a 5 year component guarantee as standard unless stated otherwise. Our standard component guarantee applies when the product has been used for the purpose intended and under normal conditions. Replacements necessitated by normal wear and tear, accident, improper care or use, negligence or a natural breakdown of colours and materials over extended time and use, are not covered under our guarantee.

Our Ranges

Regent

Traditionally styled executive furniture

KiS+

Furniture and storage that's built to last

Essentials

Straightforward furniture for straightforward businesses

Training

Versatile tables for training and conference areas

Café Bistro

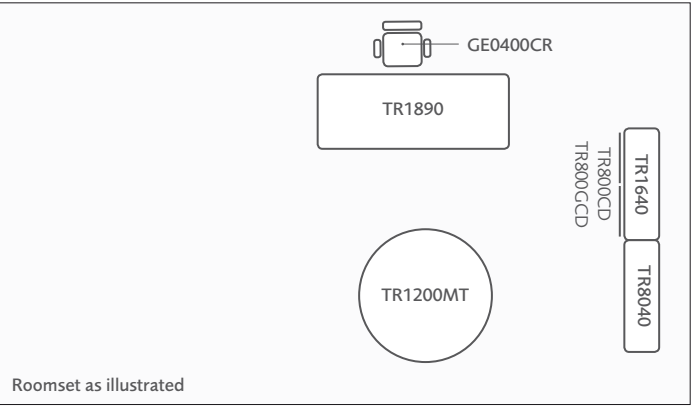

Contemporary tables for dining and relaxing

Introducing: Regent

Traditionally styled executive furniture

Regent is an elegant, top of the range furniture collection for the classic executive office. The rich tones of light and dark walnut finish, with chrome handles and nickel plated feet, depict both style and opulence.

Introducing: Regent

Traditionally styled executive furniture

Light
Walnut

Dark
Walnut

Brushed silver cable ports create impressive highlights on the two desk options, which also feature full height modesty panels and generous 36mm tops. Modular storage with different door options, a quality pedestal with 'soft close' drawers and a selection of matching tables complete the offering.

User Guide

Codes

There's a lot of information packed into our furniture codes. Here's how they work:

Measurements

All measurements listed in this catalogue are in mm. Please see individual product sections for measurement guides.

Materials

Our furniture products are made from melamine faced chipboard (MFC). Top thicknesses vary according to range:

- Regent: 36mm
- KiS+: 25mm
- Essentials: 25mm
- Training: 25mm

Our Café Bistro products are made with wood veneer and have 18mm tops.

Fixings

We use metal to metal fixings on all our furniture products for optimum strength and stability.

Maintenance

To ensure the structural integrity of your furniture is maintained for as long as possible we recommend that all bolts and fixings are checked every 2-3 months and tightened if necessary.

Standards

KiS+ workstations conform to **BS EN 527-2:2002** mechanical safety requirements for office furniture work tables, and desks and **BS EN 12521:2009** to test level 4 requirements for strength, durability and stability of tables for domestic and contract use.

Product Development

Whilst we seek to maintain continuity of design and specification with all our products, due to our ongoing programme of continuous product development and improvement, we may need to modify or withdraw certain models or specifications. In which case, every effort will be made to provide sufficient notice in order to minimise inconvenience. All measurements are correct at time of going to print.

All products featured in this catalogue are covered by a five year guarantee subject to acceptable levels of commercial wear and tear.

Packaging

We know how easily large items of furniture can be damaged in transit. To minimise the risk of this we have invested heavily in the most efficient methods of packaging. Our furniture products are packed in 8mm, 3ply cardboard cartons. Each corner is protected by a cardboard casing and 15mm of polystyrene. In addition, two 3mm hardboard panels protect the top and bottom of the item.

Environmental Policy

As one of the UK's leading suppliers of office seating and furniture we pride ourselves on setting the highest standards when developing new products. These high standards apply not only to the quality of the products themselves, but also to the environmental impact of their production.

From packaging to plastic, we strive to ensure that all the products shown in this catalogue make use of recycled materials.

This includes:

- The cardboard and plastic used for packaging
- The plastic components
- The wood used in our products

Research has enabled us to pinpoint the optimum proportion of recycled material (30-35%) within our products, ensuring the high quality is not compromised. The wood is produced using a manufacturing process which combines recycled scrap wood with a specialist resin technique to produce high strength panels. Crucially, these panels can also be recycled after their lifetime into new panels, continuing the recyclable chain.

We employ state of the art technology and lean manufacturing techniques to ensure the optimum number of products are produced from each board. All of our products are designed to allow each component to be replaced individually, minimising the level of waste generated.

Our commitment to reducing our environmental footprint is ongoing and regular evaluations of our procedures ensures that we are continually implementing new strategies to improve our environmental policy.
